

Temporary, Demountable Buildings

Experience

Momentum has extensive experience of designing temporary, demountable and relocatable structures, building on many years of relevant experience gained in previous companies. We have delivered temporary venues and stages in the UK and overseas, using steel, aluminium, cables, tensioned and inflated membranes, polycarbonate and timber panels.

Approach

We work closely with demountable building contractors, specialist subcontractors and production managers. Given the fast track nature of all of these types of projects, we are able to draw on our experience of wind loading analysis, rigging and technical loads and relevant national and international codes of practice to provide rapid, pragmatic and buildable solutions.

Relevant Projects Include

Venues
